

PS5 - Semester 5 Project

<https://wiki.unice.fr/display/~collet/Projets+de+semestre+5+++Sl3+++2017-18>

Ph. Collet (with most of slides from S.
Mosser)
Lecture #0, 13.09.2017

Do you remember?

Slicing
Domain Driven
Code-test-build

fixed, predefined
Scope

QUALITY

Your **Cost**
implication

Time **fixed**

Projects are hard

Communication
Motivation

Coordination
Valuable Skills

A brown suede sneaker with white laces and a white sole is positioned as if about to step on a banana peel. The banana peel is yellow with brown spots and is lying on a reddish-brown wooden floor. The scene is a metaphor for a software project pitfall.

Software projects are harder

Scoping

Prioritization

Confidence

Maintenance

«Maybe the problem is not
that it's so **hard** to write
good software, ...

... but that it's so
easy to write crap.»

Course Objective

Developing **software** in a
professional
and **efficient** way.

Modus Operandi

- **Lectures (1 or 2 hours / week)**
 - Describe Methods and Tools for Software Engineering
 - External presentations (Industrial Partners, former students)
- **Software Development Project (2 hours lab session / week + personal work)**
 - Group work: 3 or 4 students / group
- Attendance is mandatory (rules and regulations applied by Polytech)

Evaluation

Facilitation

Contract

- Students:
 - **No computer** during lectures
 - **Be on time** (lectures, labs)
 - **Project involvement**
 - **Prepare** when asked for
- Teaching staff:
 - **One-week latency feedback**
 - **Availability** (email, meeting)

Watch out

- No Sesame @UNS \Rightarrow
- Not known on any evaluation platform \Rightarrow
- No evaluation \Rightarrow

0

Project Timeline: Kata

- S37 : slice the project
- S38 : deliver the sliced specification / start to code, version your code, keep the slicing log up-to-date
- S39 : code is on the git / test and code, nothing is released if not correct and if you're not confident enough in what you release
- S40 : test and code on the git / make it buildable anywhere, prepare the final release
- S41 : buildable test/code on the git / defense (and start of next project)
- Evaluation : tasks + versioning + tests + defense

Project Timeline: Main Project

- Main project
 - S41 : project description is available
 - S42 to S50 : lab coaching
 - Evaluation : lab discussion + tasks + versioning + tests + minimal code quality + defense

Project Timeline: 1 week full-time project

- 1 week
- Full time

Evaluation: Continuous Assessment

- The evaluation process is mainly individual **Continuous assessment**
 - Implication in the source code development (e.g., handled tasks, commits)
 - Test coverage, code quality

No versioning \Rightarrow 0

No testing \Rightarrow < 10

No versioning $\Rightarrow 0$

No testing $\Rightarrow < 10$
